Clinical Assessment & Plan

Hilton Prosacco's vital signs show a slightly elevated heart rate, with a low HRV suggesting potential autonomic nervous system stress. This could be related to his current chemotherapy regimen, which includes multiple doses of Paclitaxel and Cisplatin. These medications are known to cause cardiac toxicity, and it's important to monitor Hilton closely for any worsening symptoms or changes in his heart function. A thorough cardiac evaluation may be warranted to assess his current cardiac status and guide further treatment decisions.
